

100 Percent Latest Microsoft 70-414 211q Exam Questions From Lead2pass Ensure 100 Percent Exam Pass (91-100)

Need The Newest 70-414 Exam Dumps? Why not try Lead2pass 70-414 vce or pdf exam dumps? You can get all the new 70-414 exam questions and answers you need, we ensure high pass rate and money back guarantee. QUESTION 91 Your network contains an Active Directory domain. The domain contains 10 file servers. The file servers connect to a Fibre Channel SAN. You plan to implement 20 Hyper-V hosts in a failover cluster. The Hyper-V hosts will not have host bus adapters (HBAs). You need to recommend a solution for the planned implementation that meets the following requirements: The virtual machines must support live migration. The virtual hard disks (VHDs) must be stored on the file servers. Which two technologies achieve the goal? Each correct answer presents a complete solution. A. Cluster Shared Volume (CSV) B. An NFS share C. Storage pools D. SMB 3.0 shares Answer: CD QUESTION 92 Your network contains an Active Directory domain named contoso.com. The domain contains four servers on a test network. The servers are configured as shown in the following table.

Server name	Role
Server1	Hyper-V
Server2	File and Storage Services
Server3	File and Storage Services
Server4	File and Storage Services

Server1 uses the storage shown in the following table.

Drive name	Type
C	Locally attached IDE disk
D	Locally attached SCSI disk
E	Tiered storage space from locally attached SCSI and SSD drives

You perform the following tasks:- On Server2F you create an advanced SMB share named Share2A and an applications SMB share named Share2B.- On Server3, you create an advanced SMB share named Share3. - On Server4, you create an applications SMB share named Share4. You add Server3 and Server4 to a new failover cluster named Clus1. On Clus1, you configure the File Server for general use role, you create a quick SMB share named Share5A, and then you create an applications SMB share named Share5B. You plan to create a failover cluster of two virtual machines hosted on Server1. The clustered virtual machines will use shared .vhdx files. You need to recommend a location to store the shared .vhdx files. Where should you recommend placing the virtual hard disk (VHD)? A. \Server3Share3B. \Server2Share2BC. \Clus1Share5BD. \Server4Share4 Answer: C QUESTION 93 Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012 R2. The network contains a System Center 2012 R2 Data Protection Manager (DPM) deployment. The domain contains six servers. The servers are configured as shown in the following table.

Server name	Role	Node in cluster
Server1	Domain controller	Not applicable
Server2	Domain controller	Not applicable
Server3	Microsoft SQL Server	Cluster1
Server4	Microsoft SQL Server	Cluster1
Server5	Not applicable	Cluster2
Server6	Not applicable	Cluster2

You install System Center 2012 R2 Virtual Machine Manager (VMM) on the nodes in Cluster2. You configure VMM to use a database in Cluster1. Server5 is the first node in the cluster. You need to back up the VMM encryption key. What should you back up? A. A full system backup of Server1B. A full system backup of Server3C. A backup of the WindowsDigitalLocker folder on Server5D. A backup of the WindowsDigitalLocker folder on Server1 Answer: A QUESTION 94 You have a Windows Server 2012 R2 failover cluster that contains four nodes. The cluster has Dynamic Optimization enabled. You deploy three highly available virtual machines to the cluster by using System Center 2012 R2 Virtual Machine Manager (VMM). You need to prevent Dynamic Optimization from placing any of the three virtual machines in the same node. What should you do? A. From the Virtual Machine Manager console, modify the Compatibility settings in the Hardware Configuration properties of the virtual machines. B. Set the Priority property of the virtual machine cluster role. C. From the Virtual Machine Manager console, modify the Servicing Windows settings of the virtual machines. D. From the Virtual Machine Manager console, modify the Availability settings in the

Hardware Configuration properties of the virtual machines. Answer: D
Explanation:The correct answer in the real exam is Anti Affinity command.
Case Study 3: Proseware Inc (QUESTION 95 - QUESTION 103)
Overview General Overview
Proseware Inc., is a manufacturing company that has 4,000 employees. Proseware works with a trading partner named Fabrikam, Inc.
Physical Locations
Proseware has a main office and two branch offices. The main office is located in London. The branch offices are located in Madrid and Berlin. Proseware has a sales department based in the London office and a research department based in the Berlin office. The offices connect to each other by using a WAN link. Each office connects directly to the Internet. Proseware rents space at a hosting company. All offices have a dedicated WAN link to the hosting company. Web servers that are accessible from the Internet are located at the hosting company.
Active Directory
The Proseware network contains an Active Directory forest named proseware.com. The forest contains a single domain. The forest functional level is Windows Server 2012. Each office contains three domain controllers. An Active Directory site is configured for each office. System state backups are performed every day on the domain controllers by using System Center 2012 R2 Data Protection Manager (DPM).
Virtualization
Proseware has Hyper-V hosts that run Windows Server 2012 R2. Each Hyper-V host manages eight to ten virtual machines. The Hyper-V hosts are configured as shown in the following table.

Server name	Location
HyperV1	London
HyperV2	London
HyperV3	Madrid
HyperV4	Madrid
HyperV5	Berlin
HyperV6	Berlin
HyperV7	Hosting company
HyperV8	Hosting company
VDI1	London
VDI2	London

All of the Hyper-V hosts store virtual machines on direct-attached storage (DAS).
Servers
All servers run Windows Server 2012 R2. All of the servers are virtualized, except for the Hyper-V hosts. VDI1 and VDI2 use locally attached storage to host virtual hard disk (VHD) files. The VHDs use the .vhd format. A line-of-business application named SalesApp is used by the sales department and runs on a server named APP1. APP1 is hosted on HyperV2. A server named CA1 has the Active Directory Certificate Services server role installed and is configured as an enterprise root certification authority (CA) named ProsewareCA. Ten load-balanced web servers hosted on HyperV7 and HyperV8 run the Internet-facing web site that takes orders from Internet customers. System Center 2012 R2 Operations Manager is used to monitor the health of the servers on the network. All of the servers are members of the proseware.com domain, except for the servers located in the perimeter network.
Client Computers
All client computers run either Windows 8.1 or Windows 7. Some of the users in the London office connect to pooled virtual desktops hosted on VDI1 and VDI2.
Problem Statements
Proseware identifies the following issues on the network:
Virtualization
administrators report that the load on the Hyper-V hosts is inconsistent. The virtualization administrators also report that administrators fail to account for host utilization when creating new virtual machines. Users in the sales department report that they experience issues when they attempt to access SalesApp from any other network than the one in the London office. Sometimes, configuration changes are not duplicated properly across the web servers, resulting in customer ordering issues. Web servers are regularly changed. Demand for virtual desktops is increasing. Administrators report that storage space is becoming an issue as they want to add more virtual machines. In the past, some personally identifiable information (PII) was exposed when paper shredding procedures were not followed.
Requirements
Planned Changes
Proseware plans to implement the following changes on the network:
- Implement a backup solution for Active Directory.
- Relocate the sales department to the Madrid office.
- Implement System Center 2012 R2 components, as required.
- Protect email attachments sent to Fabrikam that contain PII data so that the attachments cannot be printed.
- Implement System Center 2012 R2 Virtual Machine Manager (VMM) to manage the virtual machine infrastructure. Proseware does not plan to use private clouds in the near future.
- Deploy a new Hyper-V host named RESEARCH1 to the Berlin office. RESEARCH1 will be financed by the research department. All of the virtual machines deployed to RESEARCH1 will use VMM templates.
Technical Requirements
Proseware identifies the following virtualization requirements:
- The increased demand for virtual desktops must be met.
- Once System Center is deployed, all of the Hyper-V hosts must be managed by using VMM.
- If any of the Hyper-V hosts exceeds a set number of virtual machines, an administrator must be notified by email.
- Network administrators in each location must be responsible for managing the Hyper-V hosts in their respective location. The management of the hosts must be performed by using VMM.
- The network

technicians in each office must be able to create virtual machines in their respective office.- The network technicians must be prevented from modifying the host server settings.- New virtual machines must be deployed to RESEARCH1 only if the virtual machine template used to create the machine has a value specified for a custom property named CostCenter' that matches Research'.The web site configurations must be identical on all web servers.Security RequirementsProseware identifies the following security requirements:- All email messages sent to and from Fabrikam must be encrypted by using digital certificates issued to users by the respective CA of their company. No other certificates must be trusted between the organizations.- Microsoft Word documents attached to email messages sent from Proseware to Fabrikam must be protected.- Privileges must be minimized, whenever possible.

QUESTION 95You need to recommend changes to the virtual desktop infrastructure (VDI) environment. What should you recommend? A. Implement Hyper-V replication between VDI1 and VDI2.B. Create new VDI virtual machines that are Generation 2 virtual machines.C. Convert the existing VHDs to .vhdx format.D. Move the VHDs to a Cluster Shared Volume (CSV) and implement Data Deduplication on the CSV. Answer: D

QUESTION 96You need to recommend changes to the existing environment to meet the web server requirement. Which two actions should you recommend? Each Answer presents part of the solution. A. On one web server, run the Start-DSCConfiguration cmdlet. Create and run a configuration script.B. On all of the web servers, install the Windows PowerShell Web Access feature, and then run the Set-DscLocalConfigurationManager cmdlet.C. On all of the web servers, configure the Local Configuration Manager settings, and then run the Set-DscLocalConfigurationManager cmdlet.D. On one web server, install the Windows PowerShell Desired State Configuration (DSC) feature. Create and run a configuration script. Answer: CD

QUESTION 97You are evaluating the use of VMM to migrate APP1 for the sales users. You need to identify the effects of the migration. What should you identify? A. The VHDs and the virtual machine configuration files will move. The sales users' access to APP1 will be interrupted.B. The VHDs will move but the virtual machine configuration files will remain in the original location. The sales users will continue to have uninterrupted access to APP1.C. The virtual machine configuration files will move but the VHDs will remain in the original location. The sales users' access to APP1 will be interrupted.D. The VHDs and the virtual machine configuration files will move. The sales users will continue to have uninterrupted access to APP1. Answer: D

QUESTION 98You need to recommend changes to the existing environment to meet the PII requirement. What should you recommend? A. In the Default Domain Policy, configure auto-enrollment for the S/MIME certificates from ProsewareCA.B. Create an AD RMS cluster in Proseware, and then provision the user accounts in Proseware for the Fabrikam users.C. Configure Active Directory Federation Services (AD FS) in Fabrikam, and then install a web application proxy in Proseware.D. In the Default Domain Policy, configure auto-enrollment for the S/MIME certificates from FabrikamCA. Answer: B

QUESTION 99You need to ensure that RESEARCH1 only contains the required virtual machines. What should you do? A. Create an availability set.B. Create a custom placement rule.C. Set RESEARCH1 as a possible owner.D. Set RESEARCH1 as a preferred owner. Answer: B

QUESTION 100You need to recommend changes to the existing environment to meet the email requirement. What should you recommend? A. Implement a two-way forest trust that has selective authentication.B. Implement qualified subordination.C. Deploy the FabrikamCA root certificate to all of the client computers.D. Deploy a user certificate from FabrikamCA to all of the users. Answer: B [100% Pass]
