

[2016-New Download Free SAP C_BOOCR_11 Tests Questions And Answers From Lead2pass (141-150)]

2016 July SAP Official New Released C_BOOCR_11 Q&As in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! In recent years, many people choose to take SAP C_BOOCR_11 certification exam which can make you get the SAP certificate and that is the passport to get a better job and get promotions. How to prepare for SAP C_BOOCR_11 exam and get the certificate? Please refer to SAP C_BOOCR_11 exam questions and answers on Lead2pass. Following questions and answers are all new published by SAP Official Exam Center: <http://www.lead2pass.com/c-bocr-11.html>

QUESTION 141 You create a variable in a subreport to pass back the following formula, called @SKUcalc, to the main report: WhilePrintingRecords; Numbervar SKU; SKU:=maximum(Part.PartID); In the main report, you create a formula called @SKUdisplay to display the SKU number: WhilePrintingRecords; Numbervar SKU; SKU When the report is run @SKUdisplay returns a NULL value. Which statement explains why the result of the formula is NULL? A. You did not declare the variable as a shared variable. B. You did not re-declare the variable in the main report. C. Only local variables can pass values from a subreport to a report. D. You did not declare the variable as a global variable. Answer: A

QUESTION 142 You have been asked to create a sales report that will be scheduled and emailed to regional managers. You have decided to index saved data to improve report performance. Which of the following is correct? (Choose two.) A. Index fields that contain unique values B. Index fields that are referenced in the record selection formula C. Do not index all of the fields in a report D. Indexing fields will reduce the report file size Answer: BC

QUESTION 143 How do you indicate the file type of the output file when using an XML transform? A. Specify the file type when adding a new transform B. Select the file type from a list when exporting using a transform C. Choose the file type when creating a new report with a transform D. Identify the file type when connecting to the data source Answer: A

QUESTION 144 You want to ensure that your Orphaned Invoice listing report displays only invoices that do not have valid Customer ID numbers. When you link the Customer and Invoice tables using the Customer ID field, what type of join do you specify? A. Right Outer Join B. Enforced To Join C. Right Inner Join D. Not Equal Join Answer: A

QUESTION 145 You design a Crystal report for the sales department that is grouped by customer ID and order date and contains subtotals at both group levels. The Page Header contains the special field Page N of M. What is the highest stage of processing that this report requires? A. Pass 2 B. Pass 1 C. Pass 4 D. Pass 3 Answer: D

QUESTION 146 You design a report with content that needs to be maintained by the HR department in a MS Word document that is updated daily. How can you dynamically incorporate that content into a Crystal report? A. Create a dynamic connection to the HR database B. Insert a shared variable in the report header C. Hyperlink to the file on the HR server D. Insert a dynamic subreport in the report footer Answer: C

QUESTION 147 Which two statements are true of a native database connection for SQL based databases? (Choose two.) A. Requires a database client B. Has more translation layers than other connection types C. Goes through the ODBC layer D. Connects directly to its specific database type Answer: AD

QUESTION 148 You must create a formula in a Crystal report that will evaluate an array, determine if the field value is already present in the array and add the value if it does not exist as an array member. You must keep all existing array members when new values are added. There are 900 potential array members. You develop the following formula, but find that it does not work as required: shared idarray() as number shared rtI as number if onfirstrecord or {Customer.Country} <> previousvalue({Customer.Country}) thenredim idarray(1) rtI := 0 end if if not({Orders.Order ID} in idarray) then rtI := rtI + 1 formula := idarray(rtI) Which modification will make the following formula work correctly? A. Increment a second counter. B. Re-declare the variables with a new scope. C. Change the assign operators from Crystal to Basic syntax. D. Add another array variable to account for all potential array members. Answer: C

QUESTION 149 You have a report that contains an unlinked subreport. Which technique would you use to retrieve additional information on demand from within the subreport? A. Use a linked subreport B. Use a linked On-Demand report C. Hyperlink to another report D. Create an On-Demand subreport Answer: C

QUESTION 150 In a report you need to base a calculation on a shared variable passed from a subreport. Which two evaluation times could be used in the calculation? (Choose two.) A. WhileReadingRecords B. EvaluateAfter C. BeforeReadingRecords D. WhilePrintingRecords Answer: BD
