

Free Download Lead2pass Microsoft 70-463 Exam Dumps and Questions (221-230)

Looking to become a certified Microsoft professional? Would you like to reduce or minimize your Microsoft 70-463 certification cost? Do you want to pass all of the Microsoft certification? If you answered YES, then look no further. Lead2pass offers you the best Microsoft exam certification test questions which cover all core topics and certification requirements.

QUESTION 221 You are administering SQL Server Integration Services (SSIS) permissions on a production server that runs SQL Server 2012. Quality Assurance (QA) testers in the company must have permission to perform the following tasks on specific projects:- View and validate projects and packages- View Environments and Environment variables- Execute packages You need to grant the minimum possible privileges to the QA testers. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

A. In the SSISDB database, add QA Tester logons to the `ssis_admin` role.
B. In the `msdb` database, add QA Tester logons to the `db_ssisoperator` role.
C. Grant Modify permission in the projects to the QA Tester logons.
D. Grant Read permission in the SSIS catalog folder, the projects, and the Environments to the QA Tester logons.
E. Grant Execute permission in the projects to the QA Tester logons.
F. In the `msdb` database, add QA Tester logons to the `db_ssisltduser` role. Answer: BD

QUESTION 222 You are designing a data warehouse that uses SQL Server 2012. The data warehouse contains a table named `factSales` that stores product sales. The table has a clustered index on the primary key, four foreign keys to dimension tables, and an aggregate column for sales totals. All key columns use the `int` data type and the aggregate column uses the `money` data type. You need to increase the speed of data retrieval from the `factSales` table. Which index type should you add to the table?

A. Clustered
B. Semantic search
C. Nonclustered
D. XML Answer: C

QUESTION 223 You are designing a complex SQL Server Integration Services (SSIS) project that uses the Project Deployment model. The project will contain between 15 and 20 packages. All the packages must connect to the same data source and destination. You need to define and reuse the connection managers in all the packages by using the least development effort. What should you do?

A. Copy and paste the connection manager details into each package.
B. Implement project connection managers.
C. Implement package connection managers.
D. Implement parent package variables in all packages. Answer: B

QUESTION 224 You are performance tuning a SQL Server Integration Services (SSIS) package to load sales data from a source system into a data warehouse that is hosted on Windows Azure SQL Database. The package contains a data flow task that has seven source-to-destination execution trees. Only three of the source-to-destination execution trees are running in parallel. You need to ensure that all the execution trees run in parallel. What should you do?

A. Set the `EngineThreads` property of the data flow task to 7.
B. Set the `MaxConcurrentExecutables` property of the package to 7.
C. Create seven data flow tasks that contain one source-to-destination execution tree each.
D. Place the data flow task in a For Loop container that is configured to execute seven times. Answer: A

QUESTION 225 You are developing a SQL Server Integration Services (SSIS) package to implement an incremental data load strategy. The package reads data from a source system that uses the SQL Server change data capture (CDC) feature. You have added a CDC Source component to the data flow to read changed data from the source system. You need to add a data flow transformation to redirect rows for separate processing of insert, update, and delete operations. Which data flow transformation should you use?

A. DQS Cleansing
B. Merge Join
C. Pivot
D. Conditional Split Answer: D

QUESTION 226 You are designing a data warehouse that uses SQL Server 2012. You are preparing to update the contents of a fact table that contains a non-clustered columnstore index. You need to run an update statement against the table. What should you do first?

A. Pause the columnstore index.
B. Change the recovery model of the database to Bulk-logged.
C. Change the non-clustered columnstore index to be a clustered columnstore index.
D. Drop the columnstore index. Answer: D

QUESTION 227 Reporting from a Star schema is simpler than reporting from a normalized online transactional processing (OLTP) schema. What are the reasons for wanting simpler reporting? (Choose all that apply.)

A. A Star schema typically has fewer tables than a normalized schema. Therefore, queries are simpler because they require fewer joins.
B. A Star schema has better support for numeric data types than a normalized relational schema; therefore, it is easier to create aggregates.
C. There are specific Transact-SQL expressions that deal with Star schemas.
D. A Star schema is standardized and narrative; you can find the information you need for a report quickly. Answer: AD

QUESTION 228 If you want to switch content from a nonpartitioned table to a partition of a partitioned table, what conditions must the nonpartitioned table meet? (Choose all that apply.)

A. It must have the same constraints as the partitioned table.
B. It must have the same compression as the partitioned table.
C. It must be in a special `PartitionedTables` schema.
D. It must have a check constraint on the partitioning column that guarantees that all of the data goes to exactly one partition of the partitioned table.
E. It must have the same indexes as the partitioned table. Answer: ABDE

QUESTION 229 Which of the following T-SQL functions is not very useful for capturing lineage information?

A. `APP_NAME()`
B. `USER_NAME()`
C. `DEVICE_STATUS()`
D. `SUSER_SNAME()` Answer: C

QUESTION 230 Which statements best describe SQL Server Development

Tools (SSDT)? (Choose all that apply.) A. SSDT is an extension of the SQL Server Management Studio that can be used to create SSIS packages by means of a special wizard. B. SSDT is a special edition of the SQL Server Management Studio, designed to provide an improved user experience to developers who are not particularly familiar with database administration. C. SSDT is a special edition of Visual Studio, distributed with SQL Server 2012, providing a rich database development tool set. D. SSDT is a new service in SQL Server 2012 that can be used to perform SQL Server maintenance tasks, such as data movements and similar data management processes. Answer: C Lead2pass Exam Prep Products for 70-463 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development. Our Products is not only the best option for certification but also enhances your skill to an advance level and save your valuable time.
