

## Free Sharing Microsoft 70-416 PDF Dumps With New Updated Exam Questions Of Lead2pass (1-10)

Lead2pass offers the first-hand Microsoft 70-416 exam real questions and answers, by train the latest 70-416 PDF and VCE dumps, you will well prepare for the 70-416 exam. Visit [Lead2pass.com](#) to get free new version for training. QUESTION 1 Your company plans to implement a monitoring solution for application licenses. The corporate management policy states that all newly deployed technologies must be cloudbased. You need to recommend a license monitoring solution that meets the management policy. Which license monitoring solution should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.A.

The Microsoft Asset Inventory Service (AIS) B. Asset Intelligence in Microsoft System Center 2012 Configuration Manager C. The Microsoft License Statement tool D. The Microsoft Assessment and Planning (MAP) Toolkit Answer: A QUESTION 2 Your network contains an Active Directory domain named contoso.com. The domain has Microsoft System Center 2012 Configuration Manager deployed. You plan to implement Asset Intelligence reports by using Configuration Manager. You discover that the inventory data required for the Asset Intelligence reports is missing. You need to configure Configuration Manager to collect the inventory data required for the Asset Intelligence reports. What should you enable in the default settings of the client agent? To answer, select the appropriate setting in the answer area.

Answer:

QUESTION 3 You have a virtual infrastructure. The infrastructure contains servers that run Windows Server 2012 and have Microsoft Application Virtualization (App-V) 5.0 installed. You sequence an application named App1, and then assign App1 by using a Group Policy object (GPO) named GPO1. The manufacturer of App1 releases an update named Updateappl.msi. You need to deploy the updated version of App1 to all of the App-V 5.0 clients. The solution must ensure that all of the App-V 5.0 clients only run the updated version of Appl. What should you do? A. Create a new GPO, and then assign Updateappl.msi. B. From the App-V Sequencer, sequence Updateappl.msi, and then create a new GPO. C. From the App-V Sequencer, update App1.appv, and then modify the GPO. D. Create a new GPO, and then publish Updateappl.msi. Answer: B

QUESTION 4 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. A network technician installs the Remote Desktop Session Host role service on Server1. The technician cannot manage Remote Desktop Services (RDS) by using Server Manager. You need to ensure that you can manage RDS by using Server Manager on Server1. What should you do first? A. Install the Remote Desktop Connection Broker role service. B. Run an RDS scenario-based installation. C. Add Server1 to the RDS Management Servers group. D. Install the Remote Desktop Services Tools feature- Answer: B

QUESTION 5 Drag and Drop Question You have a server named Server1 that runs Windows Server 2012. Server1 has the Remote Desktop Session Host role service installed. You need to deploy an application named App1 to Server1. The deployment must ensure that hundreds of Remote Desktop Services (RDS) clients can access App1. Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Install App1 on Server1.	
Run change.exe user /execute.	
Run change.exe user /query.	
Run change.exe user /install.	
Run change.exe logon /disable.	
Run change.exe logon /enable.

Answer:

Actions	Answer Area
Install App1 on Server1.	Run change.exe user /install.
Run change.exe user /execute.	Install App1 on Server1.
Run change.exe user /query.	Run change.exe user /execute.
Run change.exe user /install.	
Run change.exe logon /disable.	
Run change.exe logon /enable.	

Explanation: Box 1: Run change.exe user /install To install an end-user application on an RD Session Host server, the RD Session Host server must first be switched into a special install mode called RD-Install to ensure that the application will be able to run in a multi-user environment. Box 2: Install App1 on Server. Box 3: Run change.exe user /execute After your applications have been installed on your RD Session Host server, you must switch the server back into execution mode (RD-Execute) before users can remotely connect to your server. You can switch between the install and execute modes from the command line using these commands:change user /installchange user /execute Reference: Technet, Learn How To Install Applications on an RD Session Host Server

QUESTION 6 Your network contains an Active Directory domain named contoso.com. The network contains a Remote Desktop Services (RDS) infrastructure. The RDS infrastructure contains five servers that run Windows Server 2012. All client computers run Windows 8. You need to recommend a software delivery method to meet the following requirements: - Minimize the amount of hardware resources used on the client computers. - Ensure that applications are launched by using document invocation.

What should you recommend? A. From an RDS server, publish RemoteApp programs. From the client computers, create a Remote Desktop connection. B. From a Microsoft Application Virtualization (App-V) publishing server, publish App-V packages, and then modify the list of file type associations. C. From an RDS server, publish RemoteApp programs. From the client computers, create a new connection URL. D. From a Group Policy, assign applications to all of the client computers, and then run gpupdate.exe /force on each client computer. Answer: C

QUESTION 7 Your network contains an Active Directory domain named contoso.com. You deploy Active Directory Certificate Services (AD CS). You plan to deploy several applications by using RemoteApp. Users will access the RemoteApp programs from domain-joined computers, home computers, and publicly accessible computers. The corporate security policy requires that all RemoteApp files be digitally signed. You need to recommend which certificate the company must use to digitally sign the RemoteApp files. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer. A. A server authentication certificate from an internal certificate authority (CA) B. A server authentication certificate from a trusted third-party certification authority (CA) C. A self-signed code signing certificate D. A client authentication certificate from a trusted third-party certification authority (CA) Answer: B

QUESTION 8 Drag and Drop Question You deploy a Remote Desktop Services (RDS) collection. You plan to provide users with access to Microsoft Application Virtualization (App-V) applications by using Remote Desktop connections. You publish several applications to an App-V publishing server. You need to recommend a solution to minimize the amount of storage space required on the RDS servers for the App-V applications. The solution must minimize the amount of time it takes for users to open the App-V applications. What four actions should you perform? To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Install the App-V for Remote Desktop Services Client on all of the Remote Desktop Session Host (RD Session Host) servers and modify the registry settings of the servers.	
Log on to a staging computer and stream all of the required applications.	
Configure the Remote Desktop Session Host (RD Session Host) servers to use the publishing server and to use publishing dates.	
Copy the cache file to a central location.	
Restart the staging computer in safe mode.	

Answer:

Actions	Answer Area
	Log on to a staging computer and stream all of the required applications.
	Restart the staging computer in safe mode.
	Copy the cache file to a central location.
Configure the Remote Desktop Session Host (RD Session Host) servers to use the publishing server and to use publishing dates.	Install the App-V for Remote Desktop Services Client on all of the Remote Desktop Session Host (RD Session Host) servers and modify the registry settings of the servers.

QUESTION 9 You plan to deploy a Microsoft Application Virtualization (App-V) infrastructure. You need to recommend a configuration for the App-V management database. The solution must ensure that you can manage the App-V infrastructure if a server that has Microsoft SQL Server installed fails. What should you recommend implementing? More than one answer choice may achieve the goal. Select the BEST answer. A. Log shipping B. A SQL Server failover cluster C. Peer-to-peer replication D. Database mirroring Answer: B

QUESTION 10 Your company plans to deploy a Microsoft Application Visualization (App-V) 5.0 infrastructure. You need to recommend a strategy to ensure that you can manage the App-V 5.0 infrastructure if a single management server fails. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer. A. Failover Clustering B. Database mirroring C. Network Load Balancing (NLB) D. DNS round robin Answer: C
