QUESTION 23 Which statement about the role of a spine switch is true? A. It connects leaf devices. B. It connects spine devices C. It connects Cisco APICs. D. It connects hosts. E. It connects external routers. F. It connects service nodes. Answer: A

QUESTION 24 Which type of ACI switch provides Layer 3 connections to outside networks? A. border leaf devices B. leaf devices C. spine devices D. service leaf devices Answer: A

QUESTION 25 Which statement about the infrastructure requirements for an ACI fabric is true? A. Hypervisors that connect to the ACI fabric must support the Cisco Discovery Protocol so that ACI can discover the presence of virtualized hosts and deploy policies to the ports on which a virtualized host is present. B. The Cisco Nexus 9336PQ form factor is well suited for large enterprise ACI deployments because it provides 288 40 Gigabit Ethernet ports at the spine. C. Leaf and spine switches can connect at 40 Gbps with multimode fiber by using the Cisco 40 Gbps short-reach bidirectional QSFP optics modules, which do not require new cabling. D. The Cisco ACI fabric uses an overlay, based on MPLS VPN, to virtualize the physical infrastructure. This overlay maps the tenant endpoint addresses to the location of the endpoint using the tunnel endpoint. Answer: C

QUESTION 26 Which statement about designing a migration approach of an existing Data Center network to Cisco ACI is true? A. The first action is to connect the Cisco APIC to the existing core Layer 3 routers so that the APIC can begin to be involved in traffic forwarding. B. When migration is complete, the existing Layer 3 devices should still serve as the default gateway. C. The service nodes must be moved first because Layer 4 to Layer 7 services (FW/LB) in the existing network will not be functional during migration. D. Simplify the migration by associating every EPG to a VLAN. Answer: D
