

[Full Version Easily Pass 70-740 Exam By Training Lead2pass Latest VCE Dumps

2017 February **Microsoft** Official New Released **70-740** Q&As in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! Lead2pass is now offering Lead2pass 70-740 dumps PDF and Test Engine with 100% passing guarantee. Buy Lead2pass 70-740 PDF and pass your exam easily. If you want real exam simulation then buy test engine and install on your pc for preparation. Following questions and answers are all new published by **Microsoft** Official Exam Center: <http://www.lead2pass.com/70-740.html>

QUESTION 1 You have a server named Server1 that runs Windows Server 2016 and has the Hyper-V server role installed. On Server1, you plan to create a virtual machine named VM1. You need to ensure that you can start VM1 from the network. What are two possible ways to achieve the goal? Each correct answer presents a complete solution. A. Create a generation 2 virtual machine. B. Create a generation 1 virtual machine and run the Enable-NetAdapterPackageDirect cmdlet. C. Create a generation 1 virtual machine that has a legacy network adapter. D. Create a generation 1 virtual machine and configure a single root I/O virtualization (SRV-IO) interface for the network adapter. Answer: A QUESTION 2 Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a dynamically expanding virtual hard disk (VHD) file that is 900 GB The VHD contains 400 GB of free space. You need to reduce the amount of disk space used by the VHD. What should you run? A. the Mount-VHD cmdlet B. the Diskpart command C. the Set-VHD cmdlet D. the Set-VM cmdlet E. the Set-VMHost cmdlet F. the Set-VMProcessor cmdlet G. the Install-WindowsFeature cmdlet H. the Optimize-VHD cmdlet Answer: H QUESTION 3 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. Your network contains an Active Directory forest. You install Windows Server 2016 on 10 virtual machines. You need to deploy the Web Server (IIS) server role identically to the virtual machines. Solution: You use Windows PowerShell Desired State Configuration (DSC) to create a default configuration and then you apply the configuration the virtual machines. Does this meet the goal? A. Yes B. No Answer: A QUESTION 4 You have a Nano Server named Nano1. Which cmdlet should you use to identify whether the DNS Server role is installed on Nano1? A. Find-NanoServerPackage B. Get-Package C. Find-Package D. Get-WindowsOptionalFeature Answer: B QUESTION 5 In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMo
Windows2008R2Forest

PS C:\> (Get-ADDomain). DomainMo
Windows2008R2Domain
PS C:\>
```

www.lead2pass.com

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment. Solution: You raise the domain functional level to Windows Server 2012 R2. Does this meet the goal? A. Yes B. No Answer: B QUESTION 6 You are configuring a Windows Server 2016 failover cluster in a workgroup. Before installing one of the nodes, you run the ipconfig /all command and receive the following output:

```
Windows IP Configuration

Host Name . . . . . : Server1
Primary Dns Suffix . . . . . :
Node Type . . . . . : Hybrid
IP Routing Enabled. . . . . : No
WINS Proxy Enabled. . . . . : No
DNS Suffix Search List. . . . . :

Ethernet adapter Ethernet:

Connection-specific DNS Suffix . :
Description . . . . . : Microsoft Hyper-V Network Adapter
Physical Address. . . . . : 00-15-5D-01-62-17
DHCP Enabled. . . . . : Yes
Autoconfiguration Enabled . . . . : Yes
Link-local IPv6 Address . . . . . : fe80::7548:46d8:8ffc:d5ab%17(Preferred)
IPv4 Address. . . . . : 192.168.1.154(Preferred)
Subnet Mask . . . . . : 255.255.255.0
Default Gateway . . . . . : 192.168.1.10
DHCPv6 IAID . . . . . : 369099429
DHCPv6 Client DUID . . . . . : 00-01-00-01-1A-1D-5D-60-00-02-A5-4E-F4-85
DNS Servers . . . . . : 192.168.1.1
NetBIOS over Tcpip. . . . . : Disabled
```

You need to ensure that Server 1 can be added as a node in the cluster. What should you do? A. Assign a static IP address B. Change the Node Type to Broadcast C. Configure a DNS suffix D. Enable NetBIOS over TCP/IP Answer: C QUESTION 7 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You are a server administrator at a company named Contoso, Ltd. Contoso has a Windows Server 2016 Hyper-V environment configured as shown in the following table.

Hyper-V host name	Configuration	Virtual switch
Host1	<ul style="list-style-type: none">• Uses an Intel processor• Is a member of a SAN named SAN1	Switch1
Host2	<ul style="list-style-type: none">• Uses an AMD processor• Has local storage only	Switch2
Host3	<ul style="list-style-type: none">• Uses an Intel processor• Is a member of a SAN named SAN1	Switch1
Host4	<ul style="list-style-type: none">• Uses an Intel processor• Has local storage only	Switch2

All of the virtual switches are of the external type. You need to ensure that you can move virtual machines between the hosts without causing the virtual machines to disconnect from the network. Solution: You implement a Hyper-V Replica between Host2 and Host4. Does this meet the goal? A. Yes B. No Answer: A QUESTION 8 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have two servers that run Windows Server 2016. You plan to create a Network load Balancing (NLB) cluster that will contain both servers. You need to configure the network cards on the servers for the planned NLB configuration. Solution: You configure the network cards to be on the same subnet and to have dynamic IP addresses. You configure the cluster to use multicast. Does this meet the goal? A. Yes B. No Answer: A QUESTION 9 You have a server named Server1 that runs Windows Server 2016. You need to configure Server1 as a multitenant RAS Gateway. What should you install on Server1? A. the Network Policy and Access Services server role B. the Remote Access server role C. the Data Center Bridging feature D. the Network Controller server role Answer: B QUESTION 10 In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem. Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode
Windows2008R2Forest

PS C:\> (Get-ADDomain). DomainMode
Windows2008R2Domain
