Conditional advertisements create routes when a predefined condition is not met.C. Conditional advertisements delete routes when a predefined condition is met.D. Conditional advertisements create routes and withhold them until a predefined condition is met.E. Conditional advertisements do not create routes, they only withhold them until a predefined condition is met. Answer: E QUESTION 471Refer to the exhibit. How can Router X in AS70000 peer with Router Y in AS65000, in case Router Y supports only 2-byte ASNs? A. Router X should be configured with a remove-private-as command, because this will establish the peering session with a random private 2-byte ASN.B. It is not possible. Router Y must be upgraded to an image that supports 4-byte ASN.C. Router Y should be configured with a 4-byte AS using the local-as command.D. Router X should be configured with a 2-byte AS using the local-as command. Answer: D QUESTION 472Which statement about BGP and diverse path advertisement is true? A. The default hello interval is 10 seconds and the default hold timer is 30 seconds.B. The hello interval can be changed on a per-interface basis with the command isis

hello-multiplier.C.   Both routers need to have the same hello intervals and hold timers in order to form IS-IS neighbors.D.   Both IS-IS routers need to have the same capabilities in the hello packet in order to form neighbors. Answer: ADExplanation:To specify the length of time between hello packets that the Cisco IOS software sends, use the isis hello-interval command in interface configuration mode.By default, a value three times the hello interval seconds is advertised as the hold time in the hello packets sent. (Change the multiplier of 3 by specifying the isis hello-multiplier command.) With smaller hello intervals, topological changes are detected faster, but there is more routing traffic.The default is 10 seconds.
