

[PDF&VCE Lead2pass Latest 200-355 PDF Guarantee 100% Pass 200-355 (101-125)]

2016 September Cisco Official New Released **200-355** Dumps in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! I was recommended by one of my friend, he used the Lead2pass 200-355 dumps and said they are helpful. He was right! I passed my Cisco 200-355 exam yesterday. I was lucky, all my questions in the exams were from Lead2pass dumps. Following questions and answers are all new published by Cisco Official Exam Center: <http://www.lead2pass.com/200-355.html> QUESTION 101 Which two statements best describe the LAG configuration between a Cisco WLC and a Cisco Catalyst switch? (Choose two.) A. The Catalyst switch should be configured for PAgP. B. The Catalyst switch should be configured only for Layer 2 load balancing. C. The Catalyst switch should be configured for "on" mode. D. The Cisco WLC relies on the connected switch to perform the load-balance of traffic. E. The Cisco WLC aggregates multiple management interfaces into a single virtual interface. Answer: CD Explanation: Restrictions for Link Aggregation You can bundle all eight ports on a Cisco 5508 Controller into a single link. Terminating on two different modules within a single Catalyst 6500 series switch provides redundancy and ensures that connectivity between the switch and the controller is maintained when one module fails. The controller's port 1 is connected to Gigabit interface 3/1, and the controller's port 2 is connected to Gigabit interface 2/1 on the Catalyst 6500 series switch. Both switch ports are assigned to the same channel group. LAG requires the EtherChannel to be configured for 'mode on' on both the controller and the Catalyst switch. Once the EtherChannel is configured as on at both ends of the link, the Catalyst switch should not be configured for either Link Aggregation Control Protocol (LACP) or Cisco proprietary Port Aggregation Protocol (PAgP) but be set unconditionally to LAG. Because Cisco WLC relies on the connected switch to perform the load-balance of traffic, the controller does not answer to negotiation frames and the LAG is not formed if a dynamic form of LAG is set on the switch. Additionally, LACP and PAgP are not supported on the controller.

http://www.cisco.com/c/en/us/td/docs/wireless/controller/7-4/configuration/guides/consolidated/b_cg74_CONSOLIDATED/b_cg74_CONSOLIDATED_chapter_0100011.html QUESTION 102 What is the result when client exclusion is enabled with a timeout

value of zero? A. Clients are excluded indefinitely. B. Clients are never excluded. C. Client exclusion is disabled. D. Clients must be explicitly included by specifying the MAC address. E. Exclusion and inclusion is determined by access list. Answer: A

QUESTION 103 An indoor 1240 AP is booting and has obtained an IP address using DHCP. The AP has confirmed prior controller IP addresses from a previously joined mobility group stored in NVRAM. What is the next step the AP performs? A. DHCP option 43. B. DNS resolution of CISCO-LWAPP-CONTROLLER.localdomain. C. Layer 2 LWAPP discovery broadcast. D. Layer 3 LWAPP discovery broadcast. E. Ping each Cisco WLC to verify its current status. F. Select a Cisco WLC based on its position in the configured join selection sequence. Answer: A QUESTION 104 Which AP to Wireless LAN Controller discovery process requires a previous association of the AP with a Cisco WLC? A. AP priming B. defining a master controller C. DHCP Option 6 D. DHCP Option 43 E. over-the-air provisioning Answer: A QUESTION 105 What two statements are true about AES-CCMP? (Choose two.) A. It is an encryption algorithm used in the 802.11i security protocol. B. It is defined in 802.1X. C. It is the encryption algorithm used in TKIP implementations. D. It is required in WPA. E. It is required in WPA2. Answer: AE

QUESTION 106 Which two Cisco Unified Wireless Network capabilities use information that is provided by Radio Resource Management neighbor messages in version 7.0 MR1? (Choose two.) A. aggressive load balancing B. dynamic channel assignment C. hybrid remote edge access point D. inter-controller mobility (that is, mobility groups) E. rogue AP classification Answer: BE

Explanation: <http://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/71113-rrm-new.html> QUESTION 107 Which option lists the key features of Cisco Compatible Extensions v5? A. Roaming and real-time diagnostics, MFP, a diagnostic channel that allows troubleshooting of the client, client reporting, optional location service, and expedited bandwidth B. AP assisted roam, Cisco Centralized Key Management, radio measurements, and transmit power control C. CAC, UPSD, voice metrics, MBSSIDs, location, link tests, and NAC D. WME, proxy ARP, EAP-FAST, and WPA2, and single sign-on E. LEAP, WPA, 802.1x and VLANs per AP, TKIP, and WiFi Answer: A

Explanation: http://www.cisco.com/web/partners/downloads/765/ccx/Comp_Ext_Cust_Preso.pdf QUESTION 108 A client is attached to the Cisco Unified Wireless Network using controllers. When the client is using WPA2 and EAP authentication, where are the wireless encryption keys located during the active user session? (Choose two.) A. on the access point B. on the RADIUS server C. on the Cisco WCS D. on the client E. on the Cisco WLC Answer: AD

Explanation: During the Active user session, WEP keys can be located on the access point as well as on the client. Network managers need to provide end users with freedom and mobility without offering intruder's access to the WLAN or the information sent and received on the wireless network. With a WLAN, transmitted data is broadcast over the air using radio waves that travel between client devices, or stations, and access points-the

WLAN endpoints on the Ethernet network that link stations to the network. This means that any WLAN client device within an access point service area can receive data transmitted to or from the access point. QUESTION 109 Which Extensible Authentication Protocol types are supported by the Cisco Unified Wireless Network? A. EAP-TLS, PEAP-MSCHAPv2, and PEAP-GTC only B. LEAP and EAP-FAST only C. EAP-TLS, PEAP-MSCHAPv2, PEAP-GTC, LEAP, and EAP-FAST only D. any EAP supported by the RADIUS authentication server Answer: D Explanation: Extensible Authentication Protocol, or EAP, is an authentication framework frequently used in wireless networks and point-to-point connections. EAP is an authentication framework providing for the transport and usage of keying material and parameters generated by EAP methods. There are many methods defined by RFCs and a number of vendor specific methods and new proposals exist. EAP is not a wire protocol; instead it only defines message formats. Each protocol that uses EAP defines a way to encapsulate EAP messages within that protocol's messages.

http://en.wikipedia.org/wiki/Extensible_Authentication_Protocol QUESTION 110 What unit of measurement is used to represent the strength of an antenna's radiation pattern? A. dBi B. dBm C. mW D. GHz Answer: A QUESTION 111 Which four parameters must be configured for local EAP-FAST on the controller? (Choose four.) A. authority ID B. authority ID Information C. client key D. PAC E. server key F. TTL for PAC G. monitor key H. NTP source Answer: ABEF Explanation: EAP-FAST is designed to speed re-authentication when a station roams from one AP to another. Here are the parameters that can be configured: * Server Key (in hexadecimal): The key (in hexadecimal characters) used to encrypt and decrypt PACs. * Time to Live for the PAC: Enter the number of days for the PAC to remain viable. The valid range is 1 to 1000 days, and the default setting is 10 days. * Authority ID (in hexadecimal): Enter the authority identifier of the local EAP-FAST server in hexadecimal characters. It is possible to enter up to 32 hexadecimal characters, but an even number of characters must be entered. This will identify the controller as the emitter of the PAC. * Authority ID Information: Enter the authority identifier of the local EAP-FAST server in text format. * Anonymous Provision: Enable this setting to allow anonymous provisioning. This feature allows PACs to be sent automatically to clients that do not have one during PAC provisioning. If this feature is disabled, PACS must be manually provisioned. Disable this feature when using EAP-FAST with certificates. The default setting is enabled. QUESTION 112 Which type of management tasks can be completed on a Cisco WLC remotely from a wireless client? A. All management and configuration tasks can be performed from a wireless client except for using debug commands. B. In the default configuration, no management or configuration is possible through the GUI or CLI on the Cisco WLC. C. The default configuration of the Cisco WLC allows only CLI access and then only the use of show commands, so no configuration is possible. D. All management and configuration tasks, except uploads from and downloads to the Cisco WLC, are permitted. Answer: B Explanation:

<http://www.cisco.com/c/en/us/td/docs/wireless/controller/6-0/configuration/guide/Controller60CG/c60intf.html> QUESTION 113 When using a Cisco WLC version 7.0 with a default configuration, how is a remote management HTTPS access connection secured? A. The Cisco WLC uses a pre-shared key to authenticate the user, which limits the number of potential users that can access the controller. B. The Cisco WLC generates its own local web administration SSL certificate and automatically applies it to the GUI. C. The Cisco WLC uses a CA certificate for SSL access. D. The Cisco WLC uses HTTPS to secure the HTTP session via a preconfigured password that generates a certificate for each session. Answer: B Explanation: You can protect communication with the GUI by enabling HTTPS. HTTPS protects HTTP browser sessions by using the Secure Socket Layer (SSL) protocol. When you enable HTTPS, the controller generates its own local web administration SSL certificate and automatically applies it to the GUI. You also have the option of downloading an externally generated certificate.

<http://www.cisco.com/c/en/us/td/docs/wireless/controller/6-0/configuration/guide/Controller60CG/c60intf.html> QUESTION 114 Which physical layer encoding technology is common to both the IEEE 802.11g and the IEEE 802.11a standards? A. BPSK B. CCK C. DSSS D. OFDM Answer: D QUESTION 115 Which set of commands assigns a standalone access point an IP address of 10.0.0.24 with a 27-bit subnet mask and a gateway of 10.0.0.1? A. config t interface BVII ip address 10.0.0.24 255.255.255.192 exit ip default-gateway 10.0.0.1 B. config t interface BVII ip address 10.0.0.24 255.255.255.224 exit ip default-gateway 10.0.0.1 C. config t interface FastEthernet1 ip address 10.0.0.24 255.255.255.224 exit ip default-gateway 10.0.0.1 D. config t interface Dot11Radio0 ip address 10.0.0.24 255.255.255.224 exit ip default-gateway 10.0.0.1 E. config t interface FastEthernet1 ip address 10.0.0.24 255.255.255.192 exit ip default-gateway 10.0.0.1 F. config t interface Dot11Radio0 ip address 10.0.0.24 255.255.255.192 exit ip default-gateway 10.0.0.1 Answer: B QUESTION 116 A controller-based wireless solution can avoid interference by dynamically adjusting what two access point transmission characteristics? (Choose two.) A. operating RF channel B. SSID names C. transmit power levels D. switch port parameters E. antenna gain Answer: AC QUESTION 117 The network administrator receives complaints of slow wireless network performance and performs a sniffer trace of the wireless network in preparation for migration to 802.11n. The sample capture shows frames that contains AP beacons with NonERP_Present bit set to 1 and frames with RTS/CTS. Which two conclusions can be interpreted from these frames? (Choose two.) A. The

network is performing slowly because 802.11n clients are already mixed with 802.11g clients. B. The network is performing slowly because 802.11b clients still exist in the network. C. The network is performing slowly because a wireless client is incorrectly configured, which results in RF interference. D. Possible 802.11b wireless clients are located only in the AP cell radius where the sniffer capture was performed. E. Possible 802.11b wireless clients could be located anywhere in the wireless network. Answer: BE Explanation: If an ERP AP hears a beacon from an AP where the supported data rates contain only 802.11b or 802.11 DSSS rates, it will enable the NonERP_Present bit in its own beacons, enabling protection mechanisms in its BSS. In simpler terms, if an 802.11g AP hears a beacon frame from an 802.11 or 802.11b access point or ad hoc client, the protection mechanism will be triggered. <http://mrcciew.com/2014/11/02/cwap-802-11-protection-mechanism/> QUESTION 118 How many dBm is 40 mW? A. 10 dBm B. 16 dBm C. 20 dBm D. 22 dBm E. 40 dBm Answer: B Explanation: The dB measures the power of a signal as a function of its ratio to another standardized value. The abbreviation dB is often combined with other abbreviations in order to represent the values that are compared. Here are two examples: You can calculate the power in dBs from this formula: Power (in dB) = 10 * log10 (Signal/Reference) This list defines the terms in the formula: Here is an example. If you want to calculate the power in dB of 50 mW, apply the formula in order to get: Power (in dB) = 10 * log10 (50/1) = 10 * log10 (50) = 10 * 1.7 = 17 dBm Because decibels are ratios that compare two power levels, you can use simple math in order to manipulate the ratios for the design and assembly of networks. For example, you can apply this basic rule in order to calculate logarithms of large numbers: log10 (A*B) = log10(A) + log10(B) If you use the formula above, you can calculate the power of 50 mW in dBs in this way: Power (in dB) = 10 * log10 (50) = 10 * log10 (5 * 10) = (10 * log10 (5)) + (10 * log10(10)) = 7 + 10 = 17 dBm <http://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/23231-powervalues-23231.html> QUESTION 119 If an antenna has a dBd of 8.6, what is the dBi value? A. 6.2 B. 6.46 C. 8.6 D. 10.74 E. 12.88 Answer: D Explanation: Antenna performance is measured in dBi (the antennas gain/loss over a theoretical isotropic antenna) dBd (the antennas gain/loss over a dipole antenna) dBi = dBd + 2.15 dBd = dBi - 2.15 QUESTION 120 Which calculation computes the EIRP of an antenna? A. EIRP = Tx power (dBm) + Antenna Gain (dBi) - Cable Loss (dB) B. EIRP= Cable Loss (dB)+ Antenna Gain (dBi) - Tx power (dBm) C. EIRP = Cable Loss (dB)+ Antenna Gain (dBi) / Tx power (dBm) D. EIRP = Tx power (dBm) + Antenna Gain (dBi) / Cable Loss (dB) E. EIRP = Antenna Gain (dBi) - Cable Loss (dB) * Tx power (dBm) F. EIRP = Tx power (dBm) * Antenna Gain (dBi) / Cable Loss (dB) Answer: A Explanation: EIRP (Effective Isotropic Radiated Power) EIRP (Effective Isotropic Radiated Power) is the actual amount of signal leaving the antenna and is a value measured in db and is based on 3 values: a) Transmit Power (dBm) b) Cable Loss (dB) c) Antenna Gain (dBi) The dB measures the power of a signal as a function of its ratio to another standardized value. The abbreviation dB is often combined with other abbreviations in order to represent the values that are compared. Here are two examples: dBm --The dB value is compared to 1 mW. dBw --The dB value is compared to 1 W. You can calculate the power in dBs from this formula: Power (in dB) = 10 * log10 (Signal/Reference) This list defines the terms in the formula: log10 is logarithm base 10. Signal is the power of the signal (for example, 50 mW). Reference is the reference power (for example, 1 mW). How to find EIRP To determine EIRP follow this equation: <Transmit Power> -Cable Loss + Antenna Gain = EIRP <https://supportforums.cisco.com/document/49506/snr-rssi-eirp-and-free-space-path-loss> QUESTION 121 Which three items are allowed on an Ethernet trunk port? (Choose three.) A. autonomous AP B. FlexConnect AP C. local AP D. monitor AP E. rogue detector AP F. sniffer AP G. SE-Connect AP H. Cisco WLC Answer: ABE Explanation: A: The basic reason as to why autonomous AP's need trunk ports and lightweight AP's don't does indeed have to do with the capwap tunnel that is used between the AP and the controller. B: you can attach the access point that is enabled for FlexConnect to a trunk or access port on the switch. E: APs can also be placed in rogue detector mode. In this mode, the rogue detector AP is placed on a trunk port so it can monitor all wired-side connected VLANs, and the AP radios are turned off. QUESTION 122 Which option describes computer-to-computer wireless communication? A. BSS and BSA B. IBSS and ad hoc network C. ad hoc network and BSA D. IBSS and ESS E. ESS and BSA F. BSS and ad hoc network Answer: B Explanation: Ad-hoc mode is an 802.11 networking framework in which devices or stations communicate directly with each other, without the use of an access point (AP). Ad-hoc mode is also referred to as peer-to-peer mode or an Independent Basic Service Set (IBSS). Ad-hoc mode is useful for establishing a network where wireless infrastructure does not exist or where services are not required. http://www.webopedia.com/TERM/A/ad_hoc_mode.html QUESTION 123 Which two statements about AES-CCMP are true? (Choose two.) A. It is an encryption algorithm used in the 802.11i security protocol. B. It is defined in 802.1X. C. It is the encryption algorithm used in TKIP implementations. D. It is required in WPA. E. It is required in WPA2. Answer: AE Explanation: WPA2 has replaced WPA. WPA2, which requires testing and certification by the Wi-Fi Alliance, implements the mandatory elements of IEEE 802.11i. In particular, it includes mandatory support for CCMP, an AES-based encryption mode with strong security. http://en.wikipedia.org/wiki/Wi-Fi_Protected_Access QUESTION 124 Effective Isotropic Radiated Power is calculated by using which three values? (Choose three.) A. antenna

bandwidth B. antenna gain C. cable loss D. receiver sensitivity E. SSID F. transmission power Answer: BCF QUESTION 125 Which statement best represents the authorization aspect of AAA? A. Authorization takes place after a successful authentication and provides the Cisco WLC the information needed to allow client access to network resources. B. Authorization is the validation of successful DHCP address delivery to the wireless client. C. Authorization must be successfully completed in order to proceed with the authentication phase. D. Successful authorization will provide encryption keys that will be used to secure the wireless communications between client and AP. Answer: A I think Lead2pass dumps are very good for the people who do not have much time for their Cisco 200-355 exam preparation. You can easily pass the exam only by memorize Lead2pass exam questions. Believe or not, I did so and I passed my 200-355 exam. **200-355** new questions on Google Drive: <https://drive.google.com/open?id=0B3Syig5i8gpDS2dtNHE0NWQwQzQ> 2016 Cisco **200-355** exam dumps (All 410 Q&As) from Lead2pass: <http://www.lead2pass.com/200-355.html> [100% Exam Pass Guaranteed]
